CHAPTER

ONE

INSTALLATION

This package is available through Pypi and can be installed by running the following command:

pip install aisquared

Alternatively, the latest version of the software can be installed directly from GitHub using the following command:

pip install git+https://github.com/AISquaredInc/aisquared

1.1 aisquared

1.1.1 aisquared package

1.1.1.1 Subpackages

aisquared.base package

Submodules

aisquared.base.BaseObject module

class aisquared.base.BaseObject.BaseObject

Bases: object

Base class used for all other classes within the aisquared package. This class is not meant to be used by any end user of this package, but is rather used throughout this package as a parent class.

 $\textbf{to_dict()} \rightarrow dict$

Get the object as a dictionary

 $\textbf{to_json()} \rightarrow str$

Return the object as a json string

aisquared.base.CustomObject module

```
class aisquared.base.CustomObject.CustomObject(class_name: str, **kwargs)
```

Bases: BaseObject

Custom class that allows the user to define custom classes for configuration

Example usage:

```
>>> import aisquared
>>> my_obj = aisquared.base.CustomObject(
    'MyClass',
    key1 = 'foo',
    key2 = 'bar'
    )
>>> my_obj.to_dict()
{'className': 'MyClass', 'params': {'key1': 'foo', 'key2': 'bar'}}
)
```

```
to_dict() \rightarrow dict
```

Get the object as a dictionary

aisquared.base.rendering module

Some allowed configuration parameters - not meant to be directly called by the end user

aisquared.base.stages module

Some allowed configuration parameters - not designed to be directly called by the user

Module contents

The aisquared base package contains both some basic objects that are used across the aisquared package backend and some objects which are designed to facilitate simple use cases of the technology.

aisquared.config package

Subpackages

aisquared.config.analytic package

Submodules

aisquared.config.analytic.DeployedAnalytic module

```
Bases: BaseObject
Interaction with a remote analytic
```

Example usage:

```
property header
property input_type
property secret
to_dict() → dict
    Get the object as a dictionary
property url
```

aisquared.config.analytic.DeployedModel module

Bases: BaseObject

Interaction with a remote model

Example usage:

property header

```
property input_type
property secret

to_dict() → dict
    Get the config object as a dictionary
property url
```

aisquared.config.analytic.LocalAnalytic module

Bases: BaseObject

Interaction with an analytic (lookup table) saved to the local file system

Example usage:

```
>>> import aisquared
>>> analytic = aisquared.config.analytic.LocalAnalytic(
    'analytic_path',
    'text'
)
>>> analytic.to_dict()
{'className': 'LocalAnalytic',
'params': {'path': 'analytic_path',
'inputType': 'text',
'all': False}}
```

```
property all
property input_type
property path
to_dict() → dict
    Get the configuration object as a dictionary
```

aisquared.config.analytic.LocalModel module

```
class aisquared.config.analytic.LocalModel.LocalModel(path: str, input_type: str)
```

Bases: BaseObject

Interaction with a model currently saved to the local file system

Example usage:

```
>>> import aisquared
>>> analytic = aisquared.config.analytic.LocalModel(
    'model_path',
    'text'
)
>>> analytic.to_dict()
```

(continues on next page)

```
{'className': 'LocalModel',
   'params': {'path': 'model_path',
   'inputType': 'text'}}

property input_type
property path
to_dict() → dict
```

aisquared.config.analytic.ReverseMLWorkflow module

Get the configuration object as a dictionary

Bases: BaseObject

Interaction with a ReverseML CSV stored in S3

Example usage:

```
>>> import aisquared
>>> analytic = aisquared.config.analytic.ReverseMLWorkflow(
    'bucket_name',
    'file_name',
    'column_name',
    'text'
)
>>> analytic.to_dict()
{'className': 'ReverseMLWorkflow',
    'params': {'bucket': 'bucket_name',
    'fileName': 'file_name',
    'inputType': 'text',
    'column': 'column_name',
    'period': None,
    'secret': ''}}
```

```
property bucket

property column

property filename

property input_type

property period

property secret

to_dict() → dict

Get the configuration object as a dictionary
```

Module contents

The aisquared.config.analytic subpackage contains objects for packaging individual analytics.

aisquared.config.feedback package

Submodules

aisquared.config.feedback.BinaryFeedback module

Feedback for binary classification

Example usage:

```
>>> import aisquared
>>> my_obj = aisquared.config.feedback.BinaryFeedback(['class1', 'class2'])
>>> my_obj.to_dict()
{'className': 'BinaryFeedback', 'params': {'labelMap': ['class1', 'class2']}}
```

property label_map

```
to_dict() \rightarrow dict
```

Return the object as a dictionary

aisquared.config.feedback.ModelFeedback module

${\bf class} \ {\bf aisquared.config.feedback.ModelFeedback.ModelFeedback}$

Bases: BaseObject

Feedback object for questions and answers for an individual model.

Example usage:

```
>>> import aisquared
>>> my_obj = aisquared.config.feedback.ModelFeedback()
>>> my_obj.add_question(
    'How is the model performing?',
    choices = ['very poorly', 'poorly', 'neutral', 'well', 'very well']
)
>>> my_obj.add_question(
    'Any additional feedback?',
    'text'
)
>>> my_obj.to_dict()
{'className': 'ModelFeedback',
'params': {'questions': [{'question': 'How is the model performing?',
'answerType': 'singleChoice',
'choices': ['very poorly', 'poorly', 'neutral', 'well', 'very well']},
{'question': 'Any additional feedback?', 'answerType': 'text'}]}
```

```
add_question(question: str, answer_type: str = 'singleChoice', choices: list = []) Add a question to be asked.
```

Parameters

- **question** (*str*) The question to be asked.
- answer_type (str (default 'singleChoice')) One of either 'singleChoice', 'multiChoice', or 'text'
- choices (list (default [])) The choices to be provided, if answer_type is 'single-Choice' or 'multiChoice'

```
to_dict() \rightarrow dict
```

Return the object as a dictionary

aisquared.config.feedback.MulticlassFeedback module

class aisquared.config.feedback.MulticlassFeedback.MulticlassFeedback(label_map: list[str])

```
Bases: BaseObject
```

Feedback for multiclass classification

Example Usage:

property label_map

```
to\_dict() \rightarrow dict
```

Return the object as a dictionary

aisquared.config.feedback.QualitativeFeedback module

 ${\bf class} \ {\bf aisquared.config.feedback.Qualitative Feedback.Qualitative Feedback}$

```
Bases: BaseObject
```

Feedback object for questions and answers for individual predictions.

Example usage:

```
>>> import aisquared
>>> my_obj = aisquared.config.feedback.QualitativeFeedback()
>>> my_obj.add_question('Any additional feedback?', 'text')
>>> my_obj.to_dict()
{'className': 'QualitativeFeedback',
'params': {'questions': [{'question': 'Any additional feedback?',
'answerType': 'text'}]}}
```

```
add\_question(question: str, answer\_type: str = 'singleChoice', choices: list = []) Add a question to be asked.
```

Parameters

- **question** (*str*) The question to be asked.
- answer_type (str (default 'singleChoice')) One of either 'singleChoice', 'multiChoice', or 'text'
- **choices** (*list* (*default* [])) The choices to be provided, if *answer_type* is 'single-Choice' or 'multiChoice'

```
to_dict() \rightarrow dict
```

Return the object as a dictionary

aisquared.config.feedback.RegressionFeedback module

class aisquared.config.feedback.RegressionFeedback.RegressionFeedback

Bases: BaseObject

Feedback for regression

Example usage:

```
>>> import aisquared
>>> my_obj = aisquared.config.feedback.RegressionFeedback()
>>> my_obj.to_dict()
{'className': 'RegressionFeedback', 'params': {}}
```

```
to_dict() \rightarrow dict
```

Return the object as a dictionary

aisquared.config.feedback.SimpleFeedback module

class aisquared.config.feedback.SimpleFeedback

```
Bases: BaseObject
```

Simple thumbs-up/thumbs-down feedback for predictions

Example usage:

```
>>> import aisquared
>>> my_obj = aisquared.config.feedback.SimpleFeedback()
>>> my_obj.to_dict()
{'className': 'SimpleFeedback', 'params': {}}
```

```
\textbf{to\_dict()} \rightarrow dict
```

Return the object as a dictionary

Module contents

The aisquared.config.feedback subpackage contains objects for configuring feedback in aisquared models.

aisquared.config.harvesting package

Submodules

aisquared.config.harvesting.lmageHarvester module

```
class aisquared.config.harvesting.ImageHarvester.ImageHarvester(how: str = 'all')
Bases: BaseObject
Object to harvest images
Example usage:
```

```
>>> import aisquared
>>> my_obj = aisquared.config.harvesting.ImageHarvester()
>>> my_obj.to_dict()
{'className': 'ImageHarvester', 'params': {'how' : 'all'}}
```

property how

```
to_dict() \rightarrow dict
```

Get the configuration object as a dictionary

aisquared.config.harvesting.InputHarvester module

Bases: BaseObject

Object to harvest user-input text

Example usage:

```
>>> import aisquared
>>> my_obj = aisquared.config.harvesting.InputHarvester()
>>> my_obj.to_dict()
{'className': 'InputHarvester',
'params': {'inputType': 'text', 'maxLength': None, 'features': None}}
```

```
property features
property input_type
property max_length
to_dict() → dict
Get the configuration object as a dictionary
```

aisquared.config.harvesting.QueryParameterHarvester module

```
\textbf{class} \ \texttt{aisquared.config.harvesting.QueryParameterHarvester.QueryParameterHarvester} (\textit{query\_keys:} \\
```

Union[str, list[str]], url_locations: Union[str, list[str]], attributes: Union[str, list[str]])

Bases: BaseObject

Harvester for Query Parameters

Example usage:

```
>>> import aisquared
>>> my_obj = aisquared.config.harvesting.QueryParameterHarvester(
    'test_key',
    'test_url',
    'test_attribute'
)
>>> my_obj.to_dict()
{'className': 'QueryParameterHarvester',
'params': {'queryKeys': ['test_key'],
'urlLocations': ['test_url'],
'attributes': ['test_attribute']}}
```

```
property attributes
```

```
property query_keys
```

```
\textbf{to\_dict()} \rightarrow dict
```

Get the configuration object as a dictionary

property url_locations

aisquared.config.harvesting.TextHarvester module

```
\textbf{class} \  \, \textbf{aisquared.config.harvesting.TextHarvester.} \\ \textbf{TextHarvester}(\textit{how: str} = \textit{'all'}, \textit{regex: Union[None, total config. harvesting.]}) \\ \textbf{TextHarvester}(\textit{how: str} = \textit{'all'}, \textit{regex: Union[None, total config. harvesting.]}) \\ \textbf{TextHarvester}(\textit{how: str} = \textit{'all'}, \textit{regex: Union[None, total config. harvesting.]}) \\ \textbf{TextHarvester}(\textit{how: str} = \textit{'all'}, \textit{regex: Union[None, total config. harvesting.]}) \\ \textbf{TextHarvester}(\textit{how: str} = \textit{'all'}, \textit{regex: Union[None, total config. harvesting.]}) \\ \textbf{TextHarvester}(\textit{how: str} = \textit{'all'}, \textit{regex: Union[None, total config. harvesting.]}) \\ \textbf{TextHarvester}(\textit{how: str} = \textit{'all'}, \textit{regex: Union[None, total config. harvesting.]}) \\ \textbf{TextHarvester}(\textit{how: str} = \textit{'all'}, \textit{regex: Union[None, total config. harvesting.]}) \\ \textbf{TextHarvester}(\textit{how: str} = \textit{'all'}, \textit{regex: Union[None, total config. harvesting.]}) \\ \textbf{TextHarvester}(\textit{how: str} = \textit{'all'}, \textit{regex: Union[None, total config. harvesting.]}) \\ \textbf{TextHarvester}(\textit{how: str} = \textit{'all'}, \textit{total config. harvesting.}) \\ \textbf{TextHarvesting.}) \\ \textbf{TextHarvester}(\textit{how: str} = \textit{'all'}, \textit{total config. harvesting.}) \\ \textbf{TextHa
```

str] = None, flags: str = 'gu', body_only: bool = False, keywords: Union[None, str, list[str]] = None, limit: Union[None, int] = None)

Bases: *BaseObject*Object to harvest text

Example usage:

```
>>> import aisquared
>>> my_obj = aisquared.config.harvesting.TextHarvester(
```

(continues on next page)

```
how = 'all',
  body_only = True
)
>>> my_obj.to_dict()
{'className': 'TextHarvester',
  'params': {'how': 'all',
  'regex': None,
  'flags': 'gu',
  'bodyOnly': True,
  'limit': None}}
```

```
property body_only
property flags
property how
property limit
property regex
to_dict() → dict
Get the configuration object as a dictionary
```

Module contents

The aisquared.config.harvesting subpackage contains objects for configuring harvesting of data.

aisquared.config.postprocessing package

Submodules

aisquared.config.postprocessing.BinaryClassification module

Bases: BaseObject

Postprocesssing configuration object for binary classification

Example usage

```
>>> import aisquared
>>> my_obj = aisquared.config.postprocessing.BinaryClassification(
    ['class1', 'class2']
)
>>> my_obj.to_dict()
{'className': 'BinaryClassification',
    'params': {'labelMap': ['class1', 'class2'], 'threshold': 0.5}}
```

```
property label_map
property threshold

to_dict() → dict
Get the configuration object as a dictionary
```

aisquared.config.postprocessing.MulticlassClassification module

Bases: BaseObject

Postprocessing configuration object for multiclass classification

Example usage:

```
>>> import aisquared
>>> my_obj = aisquared.config.postprocessing.MulticlassClassification(
    ['class1', 'class2', 'class3']
)
>>> my_obj.to_dict()
{'className': 'MulticlassClassification',
'params': {'labelMap': ['class1', 'class2', 'class3']}}
```

```
property label_map
```

```
to\_dict() \rightarrow dict
```

Get the configuration object as a dictionary

aisquared.config.postprocessing.ObjectDetection module

Bases: BaseObject

Postprocessing configuration object for object detection

Example usage:

```
>>> import aisquared
>>> my_obj = aisquared.config.postprocessing.ObjectDetection(
    ['class1', 'class2', 'class3']
)
>>> my_obj.to_dict()
{'className': 'ObjectDetection',
    'params': {'labelMap': ['class1', 'class2', 'class3'], 'threshold': 0.5}}
```

```
property label_map
```

property threshold

```
to\_dict() \rightarrow dict
```

Get the configuration object as a dictionary

aisquared.config.postprocessing.Regression module

```
class aisquared.config.postprocessing.Regression.Regression(min: Union[None, int, float] = None, max: Union[None, int, float] = None, round: bool = False)
```

Bases: BaseObject

Postprocessing configuration object for Regression

Example usage:

```
>>> import aisquared
>>> my_obj = aisquared.config.postprocessing.Regression(
        10,
        100
)
>>> my_obj.to_dict()
{'className': 'Regression', 'params': {'min': 10, 'max': 100, 'round': False}}
```

```
property max
property min
property round
to_dict() → dict
```

Get the configuration object as a dictionary

Module contents

The aisquared.config.postprocessing subpackage contains objects for configuring how predictions are postprocessed.

aisquared.config.preprocessing package

Subpackages

aisquared.config.preprocessing.image package

Submodules

aisquared.config.preprocessing.image.lmagePreprocessing module

Bases: BaseObject

Preprocessor object for image data

Example usage:

```
>>> import aisquared
     >>> preprocesser = aisquared.config.preprocessing.image.ImagePreprocessor()
     >>> preprocesser.add_step(
         aisquared.config.preprocessing.image.AddValue(255.0)
     add_step(step)
          Add a step to the preprocessor object
     property step_dict
     to\_dict() \rightarrow dict
          Get the configuration object as a dictionary
aisquared.config.preprocessing.image.Steps module
class aisquared.config.preprocessing.image.Steps.AddValue(value: Union[int, float])
     Bases: BaseObject
     Preprocessing step to add a value to all pixels in an image
     Example usage:
     >>> import aisquared
     >>> preprocesser = aisquared.config.preprocessing.image.ImagePreprocessor()
     >>> preprocesser.add_step(
         aisquared.config.preprocessing.image.AddValue(255.0)
     )
     to_dict() \rightarrow dict
          Get the configuration object as a dictionary
     property value
class aisquared.config.preprocessing.image.Steps.ConvertToColor(color: str)
     Bases: BaseObject
     Preprocessing step to convert images to a color scheme
     Example usage:
     >>> import aisquared
     >>> preprocesser = aisquared.config.preprocessing.image.ImagePreprocessor()
     >>> preprocesser.add_step(
         aisquared.config.preprocessing.image.ConvertToColor('RGB')
     property color
     to_dict() \rightarrow dict
          Get the configuration object as a dictionary
```

```
class aisquared.config.preprocessing.image.Steps.DivideValue(value: Union[int, float])
     Bases: BaseObject
     Preprocessing step to divide all pixels in an image by a value
     Example usage:
     >>> import aisquared
     >>> preprocesser = aisquared.config.preprocessing.image.ImagePreprocessor()
     >>> preprocesser.add_step(
         aisquared.config.preprocessing.image.DivideValue(255.0)
     to_dict() \rightarrow dict
          Get the configuration object as a dictionary
     property value
class aisquared.config.preprocessing.image.Steps.MultiplyValue(value: Union[int, float])
     Bases: BaseObject
     Preprocessing step to multiply all pixels in an image by a value
     Example usage:
     >>> import aisquared
     >>> preprocesser = aisquared.config.preprocessing.image.ImagePreprocessor()
     >>> preprocesser.add_step(
         aisquared.config.preprocessing.image.MultiplyValue(2.0)
     to\_dict() \rightarrow dict
          Get the configuration object as a dictionary
     property value
class aisquared.config.preprocessing.image.Steps.Resize(size: list[int], method: str = 'bilinear',
                                                               preserve_aspect_ratio: bool = False)
     Bases: BaseObject
     Preprocessing step to resize an image
     >>> import aisquared
     >>> preprocesser = aisquared.config.preprocessing.image.ImagePreprocessor()
     >>> preprocesser.add_step(
         aisquared.config.preprocessing.image.Resize([100, 100])
     property method
     property preserve_aspect_ratio
     property size
     \textbf{to\_dict()} \rightarrow dict
          Get the configuration object as a dictionary
```

```
\textbf{class} \ a is quared. config. preprocessing. image. Steps. \textbf{SubtractValue}(\textit{value}: \textit{Union[int, float]}) \\ Bases: \textit{BaseObject}
```

Preprocessing step to subtract a value from all pixels in an image

Example usage:

```
>>> import aisquared
>>> preprocesser = aisquared.config.preprocessing.image.ImagePreprocessor()
>>> preprocesser.add_step(
    aisquared.config.preprocessing.image.SubtractValue(255.0)
)
```

```
to_dict() \rightarrow dict
```

Get the configuration object as a dictionary

property value

Module contents

The aisquared.config.preprocessing.image subpackage contains objects for configuring image preprocessing.

aisquared.config.preprocessing.tabular package

Submodules

aisquared.config.preprocessing.tabular.Steps module

```
class aisquared.config.preprocessing.tabular.Steps.DropColumn(column: int)
```

Bases: BaseObject

Drop a column from tabular data

Example usage:

property column

```
to\_dict() \rightarrow dict
```

Get the configuration object as a dictionary

Bases: BaseObject

Min-Max Scaling preprocessing step

Min-Max Scaling takes all associated columns and maps values relative to the minimum and maximum values of the training data.

Example usage:

```
>>> import aisquared
>>> preprocesser = aisquared.config.preprocessing.tabular.TabularPreprocessor()
>>> preprocesser.add_step(
    aisquared.config.preprocessing.tabular.MinMax(
        [0, 1.1, 2],
        [0.2, 14, 18.3]
)
```

```
property columns
```

property maxs

property mins

 $to_dict() \rightarrow dict$

Get the configuration object as a dictionary

class aisquared.config.preprocessing.tabular.Steps.OneHot(column: int, values: list)

Bases: BaseObject

One Hot encoding preprocessing step

Example usage:

```
>>> import aisquared
>>> preprocesser = aisquared.config.preprocessing.tabular.TabularPreprocessor()
>>> preprocesser.add_step(
    aisquared.config.preprocessing.tabular.OneHot(
        6,
        ['one', 'two', 'three']
    )
)
```

property column

```
to\_dict() \rightarrow dict
```

Get the configuration object as a dictionary

property values

Bases: BaseObject

Z-Score normalization preprocessing step

Z-Score normalization takes each supplied column value, subtracts that column's provided mean, and divides by the provided standard deviation.

Example usage:

```
>>> import aisquared
>>> preprocesser = aisquared.config.preprocessing.tabular.TabularPreprocessor()
>>> preprocesser.add_step(
    aisquared.config.preprocessing.tabular.ZScore(
        [0, 1, 2],
        [0.2, 0.4, 0.6]
)
)
```

```
property columns
property means
property stds
to_dict() → dict
Get the configuration object as a dictionary
```

aisquared.config.preprocessing.tabular.TabularPreprocessing module

 $\textbf{class} \ \, \textbf{aisquared.config.preprocessing.tabular.TabularPreprocessing.TabularPreprocessor} (\textit{steps:} \\$

Union[None,

list]

= None)

Bases: BaseObject

Preprocessor object for tabular data

Example usage:

Example usage:

```
>>> import aisquared
>>> preprocesser = aisquared.config.preprocessing.tabular.TabularPreprocessor()
>>> preprocesser.add_step(
    aisquared.config.preprocessing.tabular.ZScore(
        [0, 1, 2],
        [0.2, 0.4, 0.6]
    )
)
```

```
add_step(step)
```

Add a step to the preprocessor object

to_dict()

Get the configuration object as a dictionary

Module contents

The aisquared.config.preprocessing.tabular subpackage contains objects for preprocessing tabular data.

aisquared.config.preprocessing.text package

Submodules

aisquared.config.preprocessing.text.Steps module

```
class aisquared.config.preprocessing.text.Steps.ConvertToCase(lowercase: bool = True)
    Bases: BaseObject
```

Text preprocessing object to convert inputs to all lowercase or all uppercase

Example usage:

```
>>> import aisquared
>>> preprocesser = aisquared.config.preprocessing.text.TextPreprocessor()
>>> preprocesser.add_step(
    aisquared.config.preprocessing.text.ConvertToCase()
)
```

property lowercase

```
to\_dict() \rightarrow dict
```

Get the configuration object as a dictionary

```
class aisquared.config.preprocessing.text.Steps.ConvertToVocabulary(vocabulary: dict, start_character: int = 1, oov_character: int = 2, max_vocab: Union[None, int] = None)
```

Bases: BaseObject

Text preprocessing object to convert tokens to integer vocabularies

Example usage:

```
>>> import aisquared
>>> preprocesser = aisquared.config.preprocessing.text.TextPreprocessor()
>>> preprocesser.add_step(
    aisquared.config.preprocessing.text.ConvertToVocabulary(
    {
        'test': 3,
        'vocabulary': 4
    }
)
)
```

property max_vocab

property oov_character

```
property start_character
     to\_dict() \rightarrow dict
          Get the configuration object as a dictionary
     property vocabulary
class aisquared.config.preprocessing.text.Steps.PadSequences(pad\_character: int = 0, length: int = 0)
                                                                        128, pad\_location: str = 'post',
                                                                        truncate\_location: str = 'post')
     Bases: BaseObject
     Text preprocessing object to pad sequences
     Example usage:
     >>> import aisquared
     >>> preprocesser = aisquared.config.preprocessing.text.TextPreprocessor()
     >>> preprocesser.add_step(
          aisquared.config.preprocessing.text.PadSequences()
     property length
     property pad_character
     property pad_location
     to\_dict() \rightarrow dict
          Get the configuration object as a dictionary
     property truncate_location
class aisquared.config.preprocessing.text.Steps.RemoveCharacters(remove_digits: bool = True,
                                                                            remove\_punctuation: bool =
                                                                             True)
     Bases: BaseObject
     Preprocessing step to remove characters from text
     Example usage:
     >>> import aisquared
     >>> preprocesser = aisquared.config.preprocessing.text.TextPreprocessor()
     >>> preprocesser.add_step(
          aisquared.config.preprocessing.text.RemoveCharacters()
     property remove_digits
     property remove_punctuation
     to_dict() \rightarrow dict
          Get the configuration object as a dictionary
class aisquared.config.preprocessing.text.Steps.Tokenize(split sentences: bool = False,
                                                                   split_words: bool = True, token_pattern:
                                                                   str = \langle x08 \rangle \langle w \rangle + \langle x08' \rangle
```

```
Bases: BaseObject
     Preprocessing Step to tokenize text
     Example usage:
     >>> import aisquared
     >>> preprocesser = aisquared.config.preprocessing.text.TextPreprocessor()
     >>> preprocesser.add_step(
         aisquared.config.preprocessing.text.Tokenize()
     property split_sentences
     property split_words
     to\_dict() \rightarrow dict
         Get the configuration object as a dictionary
     property token_pattern
class aisquared.config.preprocessing.text.Steps.Trim
     Bases: BaseObject
     Text preprocessing class to trim whitespace from text
     Example usage:
     >>> import aisquared
     >>> preprocesser = aisquared.config.preprocessing.text.TextPreprocessor()
     >>> preprocesser.add_step(
         aisquared.config.preprocessing.text.Trim()
     to\_dict() \rightarrow dict
         Get the configuration object as a dictionary
aisquared.config.preprocessing.text.TextPreprocessing module
class aisquared.config.preprocessing.text.TextPreprocessing.TextPreprocessor(steps:
                                                                                     Optional[list] =
                                                                                     None)
     Bases: BaseObject
     Preprocessor object for natural language
     Example usage:
     >>> import aisquared
     >>> preprocesser = aisquared.config.preprocessing.text.TextPreprocessor()
     >>> preprocesser.add_step(
         aisquared.config.preprocessing.text.Tokenize()
     )
```

```
add_step(step)
    Add a step to the preprocessor object
property step_dict
to_dict() → dict
    Get the configuration object as a dictionary
```

Module contents

The aisquared.config.preprocessing.text subpackage contains objects for preprocessing text data.

Module contents

The aisquared.config.preprocessing subpackage contains utilities to configure the preprocessing of data in the data pipeline. It contains

three separate subpackages, aisquared.config.preprocessing.text, aisquared.config.preprocessing.image, and aisquared.config.preprocessing.tabular, which configure the preprocessing of different types of data.

aisquared.config.rendering package

Submodules

aisquared.config.rendering.BarChartRendering module

Bases: BaseObject

Rendering class for rendering a Bar Chart

Example usage:

```
>>> import aisquared
>>> my_obj = aisquared.config.rendering.BarChartRendering(
   'my bar chart',
   'barChart1Label',
   'MyBarChart',
   ['red', 'blue'],
   ['label1', 'label2'],
   'my_container',
```

(continues on next page)

```
'key',
    'value',
    'name'
>>> my_obj.to_dict()
{'className': 'BarChartRendering',
'label': 'my bar chart',
'params': {'id': 'barChart1Label',
'chartName': 'MyBarChart',
'chartColors': ['red', 'blue'],
'chartLabels': ['label1', 'label2'],
'containerId': 'my_container',
'predictionNameKey': 'key',
'predictionValueKey': 'value',
'predictionNameValue': 'name',
'width': 'auto',
'height': 'auto',
'xOffset': '0',
'yOffset': '0'}}
```

$to_dict() \rightarrow dict$

Get the configuration object as a dictionary

aisquared.config.rendering.ContainerRendering module

```
class aisquared.config.rendering.ContainerRendering.ContainerRendering(label: str, id: str, query\_selector: str, width: str = 'auto', height: <math>str = 'auto', display: str = 'flex', xOffset: str = '0', yOffset: str = '0', position: <math>str = '', orientation: str = '', column'
```

Bases: BaseObject

Rendering for a container

Example usage:

```
>>> import aisquared
>>> my_obj = aisquared.config.rendering.ContainerRendering(
    'my containerID',
    'mgContainerID',
    "[data-id='tabpanel-general']"
)
>>> my_obj.to_dict()
{'className': 'ContainerRendering',
    'label': 'my container',
    'params': {'id': 'myContainerID',
    'width': 'auto',
```

(continues on next page)

```
'height': 'auto',
'display': 'flex',
'xOffset': '0',
'yOffset': '0',
'position': '',
'orientation': 'column',
'querySelector': "[data-id='tabpanel-general']"}}
property display
property height
property id
property label
property orientation
property position
property query_selector
to\_dict() \rightarrow dict
    Get the configuration object as a dictionary
property width
property xOffset
property yOffset
```

aisquared.config.rendering.DashboardReplacementRendering module

 ${\bf class}\ a is quared. config. rendering. Dashboard Replacement Rendering. Dashboard Rendering. Das$

```
str,
where_replace
str
=
",
la-
bel:
str
=
"')
```

```
Bases: BaseObject
```

Rendering for dashboard replacement

Example usage:

```
>>> import aisquared
>>> my_obj = aisquared.config.rendering.DashboardReplacementRendering(
    'test_anchor_selector'
)
```

(continues on next page)

```
>>> my_obj.to_dict()
{'className': 'DashboardReplacementRendering',
    'label': '',
    'params': {'anchorSelector': 'test_anchor_selector', 'whereReplace': ''}}

property anchor_selector

property label

to_dict() → dict
    Get the configuration object as a dictionary

property where_replace
```

aisquared.config.rendering.DocumentRendering module

```
class aisquared.config.rendering.DocumentRendering.DocumentRendering(prediction_key: str =
```

'className', words: *Union[None, list[str], dict,* str] = None, documents: *Union[None, list[str], dict,* str] = None,include_probability: bool = False, probability_key: str = 'probability', $underline\ color:\ str =$ 'blue', classes: Union[None, list[str]] =*None*, *threshold_key*: Union[None, str] = None,threshold_value: Union[None, int, float] =None)

Bases: BaseObject

Object which dictates how to render predictions on entire documents

Example usage:

```
>>> import aisquared
>>> my_obj = aisquared.config.rendering.DocumentRendering()
>>> my_obj.to_dict()
{'className': 'DocumentRendering',
    'params': {'predictionKey': 'className',
    'words': None,
    'documents': None,
    'includeProbability': False,
    'probabilityKey': 'probability',
    'underlineColor': 'blue',
    'classes': None,
    'thresholdKey': None,
    'thresholdValue': None}}
```

```
property classes
property documents
property include_probability
property prediction_key
property probability_key
property threshold_key
property threshold_value
to_dict() → dict
    Get the configuration object as a dictionary
property underline_color
property words
```

aisquared.config.rendering.DoughnutChartRendering module

```
class aisquared.config.rendering.DoughnutChartRendering.DoughnutChartRendering(label: str, id:
```

```
chart_name:
str,
chart_colors:
list[str],
chart_labels:
list[str],
container_id:
str, predic-
tion_name_key:
str, predic-
tion_value_key:
str, predic-
tion_name_value:
str, dis-
play_legend:
bool,
legend icon:
str, width: str
= 'auto',
height: str =
'auto',
xOffset: str =
'0', yOffset:
str = '0'
```

Bases: BaseObject

Rendering class for rendering a Doughnut Chart

Example usage:

```
>>> import aisquared
>>> my_obj = aisquared.config.rendering.DoughnutChartRendering(
    'my doughnut chart',
    'MyDoughnutChartID',
    'MyDoughnutChart',
    ['red', 'blue'],
    ['label1', 'label2'],
    'my_countainer_id',
    'key',
    'value',
    'name',
    True,
    'circle'
>>> my_obj.to_dict()
{'className': 'DoughnutChartRendering',
'label': 'my doughnut chart',
'params': {'id': 'MyDoughnutChartID',
'chartName': 'MyDoughnutChart',
'chartColors': ['red', 'blue'],
'chartLabels': ['label1', 'label2'],
'containerId': 'my_countainer_id',
'predictionNameKey': 'key',
'predictionValueKey': 'value',
'predictionNameValue': 'name',
'displayLegend': True,
'legendIcon': 'circle',
'width': 'auto',
'height': 'auto',
'xOffset': '0',
'yOffset': '0'}}
```

$to_dict() \rightarrow dict$

Get the configuration object as a dictionary

aisquared.config.rendering.FilterRendering module

Bases: BaseObject

Object which dictates how predictions are to be passed to downstream analytics

Example usage:

```
>>> import aisquared
>>> my_obj = aisquared.config.rendering.FilterRendering(
   'inputs',
   'key',
   'gt',
   0.2
```

(continues on next page)

```
)
>>> my_obj.to_dict()
{'className': 'FilterRendering',
'params': {'source': 'inputs', 'key': 'key', 'qualifier': 'gt', 'value': 0.2}}

property key
property qualifier
property source
to_dict() → dict
Get the configuration object as a dictionary
property value
```

aisquared.config.rendering.HTMLTagRendering module

Bases: BaseObject

Rendering for HTML tags

Example usage:

```
>>> import aisquared
>>> my_obj = aisquared.config.rendering.HTMLTagRendering(
    'my HTML tag',
    'MyHTMLTagRenderingID',
    'MyContainerID',
    'Example Text',
    'extra_tag',
    'append',
    'name_key',
    'value_key',
    'name_value'
>>> my_obj.to_dict()
{'className': 'HTMLTagRendering',
'label': 'my HTML tag',
'params': {'id': 'MyHTMLTagRenderingID',
'containerId': 'MyContainerID',
'htmlContent': 'Example Text',
'extraContentTag': 'extra_tag',
'injectionAction': 'append',
```

(continues on next page)

```
'predictionNameKey': 'name_key',
'predictionValueKey': 'value_key',
'predictionNameValue': 'name_value',
'content': ''}}
```

```
\textbf{to\_dict()} \rightarrow dict
```

Return the configuration object as a dictionary

aisquared.config.rendering.lmageRendering module

Bases: BaseObject

Object which dictates how to render images

Example usage:

```
>>> import aisquared
>>> my_obj = aisquared.config.rendering.ImageRendering()
>>> my_obj.to_dict()
{'className': 'ImageRendering',
'params': {'color': 'blue',
'thickness': '5px',
'placement': 'bottomleft',
'includeProbability': False,
'badgeColor': 'white',
'fontColor': 'black',
'fontSize': '5px',
'classes': None,
'thresholdKey': None,
'thresholdValue': None}}
```

```
property badge_color
property classes
property color
property font_color
property font_size
property include_probability
```

```
property placement
property thickness
property threshold_key
property threshold_value
to_dict() → dict
Get the configuration object as a dictionary
```

aisquared.config.rendering.LineChartRendering module

```
class aisquared.config.rendering.LineChartRendering.LineChartRendering(label: str, id: str, chart\_name: str, chart\_labels: list[str], chart\_labels: list[str], container\_id: str, prediction\_name\_key: str, prediction\_value\_key: str, prediction\_value: str, width: str = 'auto', str
```

Bases: BaseObject

Rendering class for rendering a Line Chart

Example usage:

```
>>> import aisquared
>>> my_obj = aisquared.config.rendering.LineChartRendering(
    'my line chart',
    'MyLineChartID',
    'MyLineChart',
    ['red', 'blue'],
    ['label1', 'label2'],
    'MyContainerID',
    'name_key',
    'value_key',
    'name_value'
>>> my_obj.to_dict()
{'className': 'LineChartRendering',
'label': 'my line chart',
'params': {'id': 'MyLineChartID',
'chartName': 'MyLineChart',
'chartColors': ['red', 'blue'],
'chartLabels': ['label1', 'label2'],
'containerId': 'MyContainerID',
'predictionNameKey': 'name_key',
```

(continues on next page)

(continued from previous page)

```
'predictionValueKey': 'value_key',
'predictionNameValue': 'name_value',
'width': 'auto',
'height': 'auto',
'xOffset': '0',
'yOffset': '0'}}
```

 $to_dict() \rightarrow dict$

Get the configuration object as a dictionary

aisquared.config.rendering.ObjectRendering module

Bases: BaseObject

Object which dictates how to render object detection in images

Example usage:

```
>>> import aisquared
>>> my_obj = aisquared.config.rendering.ObjectRendering()
>>> my_obj.to_dict()
{'className': 'ObjectRendering',
'params': {'color': 'blue',
'thickness': '5px',
'placement': 'bottomleft',
'includeProbability': False,
'badgeColor': 'white',
'fontColor': 'black',
'fontSize': '5px'}}
```

```
property badge_color

property color

property font_color

property font_size

property include_probability

property placement

property thickness

to_dict() → dict

Get the configuration object as a dictionary
```

aisquared.config.rendering.PieChartRendering module

Bases: BaseObject

Rendering class for rendering a Pie Chart

Example usage:

```
>>> import aisquared
>>> my_obj = aisquared.config.rendering.PieChartRendering(
    'my pie chart',
    'MyPieChartID',
    'MyPieChart',
    ['red', 'blue'],
    ['label1', 'label2'],
    'my_countainer_id',
    'key',
    'value',
    'name',
    True,
    'circle'
>>> my_obj.to_dict()
{'className': 'PieChartRendering',
'label': 'my pie chart',
'params': {'id': 'MyPieChartID',
'chartName': 'MyPieChart',
'chartColors': ['red', 'blue'],
'chartLabels': ['label1', 'label2'],
'containerId': 'my_countainer_id',
'predictionNameKey': 'key',
'predictionValueKey': 'value',
'predictionNameValue': 'name',
'displayLegend': True,
'legendIcon': 'circle',
'width': 'auto',
'height': 'auto',
'xOffset': '0',
'yOffset': '0'}}
```

 $\textbf{to_dict()} \rightarrow dict$

yOffset: str = '0'

Get the configuration object as a dictionary

aisquared.config.rendering.SOSRendering module

```
class aisquared.config.rendering.SOSRendering.SOSRendering(can_toggle: bool, label: str = ")
    Bases: BaseObject
    Rendering of an SOS dashboard
    Example usage:

>>> import aisquared
>>> my_obj = aisquared.config.rendering.SOSRendering(True)
>>> my_obj.to_dict()
{'className': 'SOSRendering', 'label': '', 'params': {'canToggle': True}}

property can_toggle

property label

to_dict() → dict
```

aisquared.config.rendering.TableRendering module

Get the configuration object as a dictionary

Bases: BaseObject

Class for rendering tables

Example usage:

```
>>> import aisquared
>>> my_obj = aisquared.config.rendering.TableRendering(
    'my table',
    'MyTableID',
    'MyContainerID',
    'name_key',
    'value_key',
    'name_values'
>>> my_obj.to_dict()
{'className': 'TableRendering',
'label': 'my table',
'params': {'id': 'MyTableID',
'containerId': 'MyContainerID',
'predictionNameKey': 'name_key',
'predictionValueKey': 'value_key',
'predictionNameValues': 'name_values',
'tableName': ''}}
```

```
to\_dict() \rightarrow dict
```

Get the configuration object as a dictionary

aisquared.config.rendering.WordRendering module

Bases: BaseObject

Object for rendering badges on individual words

Example usage:

```
>>> import aisquared
>>> my_obj = aisquared.config.rendering.WordRendering()
>>> my_obj.to_dict()
{'className': 'WordRendering',
'params': {'wordList': 'input',
'resultKey': None,
'contentKey': None,
'badgeShape': 'star',
'badgeColor': 'blue',
'classes': None,
'thresholdKey': None,
'thresholdValue': None}}
```

```
property badge_color
property badge_shape
property classes
property content_key
property result_key
property threshold_key
property threshold_value
to_dict() → dict
Get the configuration object as a dictionary
property word_list
```

Module contents

The aisquared.config.rendering subpackage contains objects for configuring how rendering of predictions is to occur.

Submodules

aisquared.config.GraphConfiguration module

Bases: BaseObject

Configuration object for deploying a set of processing steps and/or analytics as a dependency graph

```
add_node(step: BaseObject, dependencies: Union[None, int, list[int]] = None) \rightarrow int Add a node to the configuration graph
```

Parameters

- **step** (aisquared configuration step) The step to add
- **dependencies** (*int*, *list* of *int*, or *None*) The ids of nodes which must be run before the added node

bool = False)

Returns

node_id - The integer id of the node that is added

Return type

int

property auto_run

```
compile(filename: Union[None, str] = None, dtype: Union[None, str] = None) <math>\rightarrow None
```

Compile the object into a '.air' file, which can then be dragged and dropped into applications using the AI Squared JavaScript SDK

Parameters

- **filename** (path-like or None (default None)) Filename to compile to. If None, defaults to '{NAME}.air', where {NAME} is the name of the analytic
- **dtype** (*str or None* (*default None*)) The datatype to use for the model weights when using a Keras model. If None, defaults to 'float32'

property description

```
get_filenames() \rightarrow list[str]
```

Get filenames for all models in the configuration

property mlflow_token

```
property mlflow_uri

property mlflow_user

property name

property owner

property stage

to_dict() → dict

Get the object as a dictionary

property url

property version
```

aisquared.config.ModelConfiguration module

class aisquared.config.ModelConfiguration.ModelConfiguration(name: str, harvesting_steps:

```
Union[None, BaseObject,
list[aisquared.base.BaseObject.BaseObject]],
preprocessing_steps: Union[None,
BaseObject,
list[aisquared.base.BaseObject.BaseObject]],
analytic: Union/BaseObject,
list[aisquared.base.BaseObject.BaseObject]],
postprocessing_steps: Union[None,

= None, stage: str = 'experimental',
version: Optional[int] = None,
description: \ str = ", mlflow\_uri:
Union[None, str] = None,
mlflow user: Union[None, str] =
None, mlflow_token: Union[None,
str] = None, owner: Union[None,
str] = None, url: str = '*', auto\_run:
bool = False)
```

```
Bases: BaseObject
Configuration object for deploying a model or analytic
property analytic
property analytic_dict
```

property auto_run

```
compile(filename: Union[None, str] = None, dtype: Union[None, str] = None) <math>\rightarrow None
```

Compile the object into a '.air' file, which can then be dragged and dropped into applications using the AI Squared JavaScript SDK

Parameters

- **filename** (path-like or None (default None)) Filename to compile to. If None, defaults to '{NAME}.air', where {NAME} is the name of the analytic
- **dtype** (*str or None* (*default None*)) The datatype to use for the model weights. If None, defaults to 'float32'

```
property description
property feedback_dict
property feedback_steps
\texttt{get\_model\_filenames}() \rightarrow list[str]
    Get filenames for all models in the configuration
property harvester_dict
property harvesting_steps
property mlflow_token
property mlflow_uri
property mlflow_user
property name
property owner
property postprocesser_dict
property postprocessing_steps
property preprocesser_dict
property preprocessing_steps
property render_dict
property rendering_steps
property stage
to\_dict() \rightarrow dict
    Get the object as a dictionary
property url
property version
```

Module contents

The aisquared config subpackage contains utilities and objects for packaging aisquared configuration steps and models.

For in-depth examples of how to build out .air files using the utilities and classes in this library, please visit our GitHub repository at https://github.com/AISquaredInc/airFiles

aisquared.logging package

Module contents

The aisquared.logging subpackage contains utilities for performing experiments within aisquared.

This functionality is inhereted from MLFlow. Please see the MFLow documentatation at https://mlflow.org.

aisquared.platform package

Submodules

aisquared.platform.AISquaredPlatformClient module

```
\textbf{exception} \  \, \textbf{aisquared.platform.AISquaredPlatformClient.} \\ \textbf{AISquaredAPIException}
```

Bases: Exception

class aisquared.platform.AISquaredPlatformClient.AISquaredPlatformClient

Bases: object

Client for interacting with the AI Squared platform programmatically

When using the client for the first time, it is important to run the *client.login()* method. When doing so, the client will ask for any required information interactively.

```
>>> import aisquared
>>> client = aisquared.platform.AISquaredPlatformClient()
>>> # If you have never logged in before, run the following code:
>>> client.login()
>>> # Test connection
>>> client.test_connection()
Connection successful
200
```

```
add_user_to_group(group_id, user_id)
```

Not yet implemented

```
property base_url: str
```

The base URL associated with the client

```
delete\_model(id: str, port: int = 8080) \rightarrow bool
```

Delete a model

```
>>> import aisquared
     >>> client = aisquared.platform.AISquaredPlatformClient()
    >>> client.delete_model('model_id')
    True
         Parameters
             • id (str) – The ID for the model
             • port (int (default 8080)) - The API port for the model
         Returns
            success – Whether the action was successful
         Return type
            bool
get_model(id: str, port: int = 8080) \rightarrow dict
     Retrieve a model configuration
     >>> import aisquared
    >>> client = aisquared.platform.AISquaredPlatformClient()
    >>> client.get_model('model_id')
     *JSON Response including model data and metadata*
         Parameters
             • id (str) – The ID for the model
             • port (int (default 8080)) – The API port for the call
         Returns
            data – Metadata about the model coupled with the model's configuration information
         Return type
            dictionary
get_model_id_by_name(model_name: str) \rightarrow str
     Retrieve a model's ID using the name of the model
    >>> import aisquared
    >>> client = aisquared.platform.AISquaredPlatformClient()
    >>> client.get_model_id_by_name('my_awesome_model')
    *model_id*
         Parameters
            model_name (str) – The name of the model
         Returns
            model id – The model's ID
         Return type
            str
get\_user\_id\_by\_name(name: str) \rightarrow str
     Get a user's ID from their display name
```

```
>>> import aisquared
    >>> client = aisquared.platform.AISquaredPlatformClient()
    >>> client.get_user_id_by_name('User Name')
    *user_id*
        Parameters
            name (str) – The display name of the user
        Returns
            id – The ID of the user
        Return type
            str
get_user_usage_metrics(user_id, port=8080)
    Not yet implemented
property headers
    Headers used for authentication with the AI Squared Platform
list\_group\_users(group\_id: str, as\_df: bool = True, port: int = 8083) \rightarrow Union[DataFrame, dict]
    List users in a group
    >>> import aisquared
    >>> client = aisquared.platform.AISquaredPlatformClient()
    >>> client.list_group_users('group_id')
    *DataFrame with results*
        Parameters
             • group_id (str) – The ID for the group
             • as_df (bool (default True)) – Whether to return the response as a pandas DataFrame
             • port (int (default 8083)) - The API port to use
        Returns
            users – The response from the API
        Return type
            pandas DataFrame or dictionary
list_groups(as\_df: bool = True, port: int = 8083) \rightarrow Union[DataFrame, dict]
    List all groups
    >>> import aisquared
    >>> client = aisquared.platform.AISquaredPlatformClient()
    >>> client.list_groups()
    *DataFrame with results*
```

Parameters

- as_df (bool (default True)) Whether to return the result as a pandas DataFrame
- port (int (default 8083)) The API port for the call

Returns

groups - The response from the API

Return type

pandas DataFrame or dictionary

list_model_feedback(model_id, port=8080)

Not yet implemented

list_model_prediction_feedback(model_id)

Not yet implemented

list_model_predictions(model_id, port=8080)

Not yet implemented

```
list_model_users(id: str, as_df: bool = True, port: int = 8080) \rightarrow Union[DataFrame, dict]
```

List users for a model

```
>>> import aisquared
>>> client = aisquared.platform.AISquaredPlatformClient()
>>> client.list_model_users('model_id')
*DataFrame with results*
```

Parameters

- id (str) The ID for the model
- as_df (bool (default True)) Whether to return the response as a Pandas DataFrame
- port (int (default 8080)) The API port for the call

Returns

model_users - The users for the model

Return type

pandas DataFrame or dictionary

```
list_models(as\_df: bool = True, port: int = 8080) \rightarrow Union[DataFrame, dict]
```

List models within the platform

```
>>> import aisquared
>>> client = aisquared.platform.AISquaredPlatformClient()
>>> client.list_models()
*DataFrame with results*
```

Parameters

- as_df (bool (default True)) Whether to return the response as a pandas DataFrame
- port (int (default 8080)) The API port for the call

Returns

models – The models

Return type

pandas DataFrame or dictionary

```
list_prediction_feedback(prediction_id, port=8080)
```

Not yet implemented

```
list_users(as\_df: bool = True, port: int = 8080) \rightarrow Union[DataFrame, dict]
```

List all users

```
>>> import aisquared
>>> client = aisquared.platform.AISquaredPlatformClient()
>>> client.list_users()
*DataFrame with results*
```

Parameters

- as_df (bool (default True)) Whether to return the data as a Pandas DataFrame
- port (int (default 8080)) The API port for the call

Returns

users – The response from the API

Return type

pandas DataFrame or dictionary

```
login(url: Union[None, str] = None, port: int = 8080, username: Union[None, str] = None, password: Union[None, str] = None) <math>\rightarrow None
```

Log in to the platform programmatically. If no url, username, or password are provided, logs in interactively

```
>>> import aisquared
>>> client = aisquared.platform.AISquaredPlatformClient()
>>> client.login()
Enter URL: https://platform.squared.ai
Enter Username: your.email@your_domain.com
Enter Password: <hidden>
```

Parameters

- **url** (str or None (default None)) The URL for the platform API
- port (int (default 8080)) The API port for the call
- username (str or None (default None)) The username
- password (str or None (default None)) The password

property password: str

The password associated with the client

```
remove_user_from_group(group id, user id)
```

Not yet implemented

```
share_model_with_group(model_id, group_id, port=8083)
```

Not yet implemented

```
share\_model\_with\_user(model\_id: str, user\_id: str, port: int = 8080) \rightarrow bool
```

Share a model with a user

```
>>> import aisquared
     >>> client = aisquared.platform.AISquaredPlatformClient()
    >>> client.share_model_with_user('model_id', 'user_id')
    True
         Parameters
             • model_id (str) - The ID for the model
             • user_id (str) – The ID for the user
             • port (int (default 8080)) - The API port for the call
         Returns
            success – Whether the action was successful
         Return type
            bool
test_connection(port: int = 8080) \rightarrow int
     Test whether there is a healthy connection to the platform
     >>> import aisquared
    >>> client = aisquared.platform.AISquaredPlatformClient()
     >>> client.test_connection()
     Connection successful
     200
         Parameters
            port (int (default 8080)) - The API port for the call
         Returns
            status_code - The status code when checking the health API
         Return type
            int
property token: str
     The token associated with the client
unshare\_model\_with\_user(model\_id: str, user\_id: str, port: int = 8080) \rightarrow bool
     Unshare a model with a user
    >>> import aisquared
    >>> client = aisquared.platform.AISquaredPlatformClient()
     >>> client.unshare_model_with_user('model_id', 'user_id')
     True
         Parameters
             • model_id (str) - The ID for the model
             • user_id (str) – The ID for the user
             • port (int (default 8080)) - The API port for the call
```

1.1. aisquared 45

success - Whether the action was successful

Returns

Return type

bool

```
upload_model(model\_file: str, port: int = 8081) \rightarrow str
```

Upload a model to the platform

```
>>> import aisquared
>>> client = aisquared.platform.AISquaredPlatformClient()
>>> client.upload_model('my_model_filename.air')
True
```

Parameters

- **model_file** (path or path-like) The path to the model file
- port (int (default 8081)) The API port to use

Returns

successful – Whether the action was successful

Return type

bool

property username: str

The username associated with the client

Module contents

Utilities for interacting with the AI Squared Platform.

The primary class within this subpackage is the *AISquaredPlatformClient* class, which has the capabilities to interact with much of the functionality in the AI Squared platform. For more information about this class, please see its documentation.

aisquared.serving package

Submodules

aisquared.serving.deploy_model module

```
aisquared.serving.deploy_model.deploy_model(saved_model: str, model_type: str, host: str = '127.0.0.1', port: int = 2244, custom_objects: Union[None, dict] = None, additional_functions_file: Union[None, str] = None)
```

Deploy a model to a Flask server on the specified host

Parameters

- **saved_model** (*Path-like*) The path to the saved model directory or model file
- **model_type** (*str*) The type of model
- host (str (default '127.0.0.1')) The host to deploy to
- port (int (default 2244)) The port to deploy to

- **custom_objects** (*dict or None* (*default None*)) Any custom objects to load when using a MANN model
- additional_functions_file (file-like or None (default None)) File name containing additional functions (which have to be named preprocess and postprocess, if created) that are used during the prediction process

aisquared.serving.deploy_model.load_mann_model(model: str, custom_objects: dict)

Load a MANN model with custom objects

aisquared.serving.get_remote_prediction module

```
aisquared.serving.get_remote_prediction.get_remote_prediction(data: Union[dict, str, ndarray, list], host: str = '127.0.0.1', port: int = 2244) \rightarrow list
```

Send data to use for prediction

Parameters

- data (dict, str, np.ndarray, or list) The data to be predicted on
- **host** (*str* (*default* '127.0.0.1')) The host to use
- port (int (default '2244')) The port to use

Notes

- If data is a dictionary, it is expected to already be correctly formatted
- If data is a string, it is expected to already be correctly formatted

Returns

predictions – The predictions from the deployed model

Return type

list

Module contents

The aisquared serving package contains utilities to serve models to a local REST endpoint.

Here is an example of how to serve a simple keras model using these utilities:

And to retrieve predictions from the model:

```
>>> # From a separate terminal, assume data is already loaded
>>> from aisquared import serving
>>> serving.get_remote_predictions(data) # Do not need to change host or port if_
-- predicting from the same machine
*predictions*
```

aisquared.utils package

Submodules

aisquared.utils.utils module

```
aisquared.utils.utils.get_model(model_type: str, input_shape: Union[int, tuple[int]], num_outputs: int, output_activation: str, size: str = 'small', vocab_size: Union[None, int] = None)
```

Get a pre-configured model for different use cases

Parameters

- model_type (str) Either 'cv', 'nlp_embedding', or 'fc', defining the model type
- input_shape (int or tuple of int) The input shape to the model
- **num_outputs** (*int*) The output shape of the model
- output_activation (str or keras activation function) The activation of the final layer of the model
- **size** (str (default 'small')) One of either 'small', 'medium', or 'large'
- **vocab_size** (str or None (default None)) Size of the vocab, if model_type is 'nlp_embedding'

Returns

model - The model

Return type

TensorFlow Keras model

```
aisquared.utils.utils.mimic_model(trained_model: BaseEstimator, nnet: Model, training_data: ndarray, test_data: ndarray, test_labels: ndarray, problem_type: str, loss: str, metrics: Union[str, list[str]], optimizer: str, mimic_proba: bool = False, retention: float = 0.9, batch_size: int = 32, epochs: int = 100, starting_sparsification: int = 0, max_sparsification: int = 99, sparsification_rate: int = 5) \rightarrow Model
```

Train a sparse neural network to mimic a scikit-learn model

Parameters

- **trained_model** (*sklearn model*) The model that is already trained
- nnet (TensorFlow keras Model) The neural network to train to mimic the trained model
- **training_data** (*array or array-like*) The input data that was used to train the trained model
- **test_data** (array or array-like) The input data to be used for testing

- test_labels (array or array-like) The output data used in testing
- **problem_type** (*str*) The type of problem, either 'classification' or 'regression'
- loss (str or keras loss function) The loss to use
- metrics (str, function or list of str, function) Metrics to measure
- **optimizer** (str or keras optimizer) The optimizer to use
- mimic_proba (bool (default False)) For classification, mimic the probability outputs
- **retention** (*float* (*default* 0.9)) The retention of performance to allow further pruning
- batch_size (int (default 32)) The batch size to use while training
- **epochs** (*int* (*default* 100)) The number of epochs (if early stopping is not met beforehand)
- **starting_sparsification** (*int* (*default* 0)) The starting model sparsification
- max_sparsification (int (default 99)) The maximum sparsification to allow
- **sparsification_rate** (*int* (*default* 5)) The sparsification rate when invoked

Returns

nnet – The trained model

Return type

TensorFlow keras Model

Module contents

Additional utilities to use with the *aisquared* package. These utilities currently consist of two functions, the *mimic_model* and *get_model* functions. They utilize functionality that exists in our open source package BeyondML to train teacher-student models

To see in-depth examples of how to use these functions, please visit our GitHub repository at https://github.com/AISquaredInc/MimicModelExamples

1.1.1.2 Module contents

This package contains utilities to interact with the AI Squared technology stack, particularly with developing and deploying models to the AI Squared Browser Extension or other applications developed through the AI Squared JavaScript SDK.

TWO

CHANGELOG

• Version 0.1.3

- Added *flags* parameter to *TextHarvester* using regular expression harvesting
- Deleted model_feedback parameter in ModelConfiguration object and included functionality in feedback_steps parameter
- Changed format parameter to header for both deployed analytics
- Added feedback and stages to *DocumentPredictor* and *ImagePredictor* objects
- Non-API changes for ALLOWED_STAGES
- Fixed bugs preventing Windows users from importing the package
- Updated ModelConfiguration to include url parameter
- Changed default tokenization string

• Version 0.2.0

- Moved preprocessing steps under subpackages for specific kinds of preprocessing steps
- Cleaned up documentation to render within programmatic access environments
- Added aisquared.logging subpackage

- Created InputHarvester

- * Allows for harvesting of input text, images, and tabular data
- Created the aisquared.serving subpackage, specifically the deploy_model and get_remote_prediction functions
- Created the GraphConfiguration class
- Added auto-run parameter to ModelConfiguration and GraphConfiguration classes

- Created the aisquared CLI with the following commands:

- * aisquared deploy, which deploys a model locally
- * aisquared predict, which predicts using a local JSON file
- * aisquared airfiles, which contains the subcommands list, delete, download, and upload
- Changed all classes within aisquared.config.analytic to accept 'tabular' as an input type
- Removed aisquared.logging and aisquared.remote from top-level imports
- Added round parameter to Regression postprocesser
- Removed *DocumentPredictor* and *ImagePredictor* classes

- Removed *ChainRendering* class
- Created FilterRendering class
- Altered QUALIFIERS
- Added advanced rendering parameters to rendering objects
- Removed *logging* and *remote* subpackages from top-level *aisquared* import

Version 0.2.1

- Added the S3Connector class to the analytics subpackage, which allows download of an analytic directly from S3
- Updated the documentation and added the docs subdirectory for hosting the documentation on GitHub Pages

• Version 0.2.2

- Fixed bug in to_dict method within ObjectRendering class
- Fixed bug in name of MultiplyValue step
- Fixed bug in datatype checking for text harvester
- Added body_only parameter to TextHarvester
- Added 'underline' to possible badges
- Added threshold_key and threshold_values to relevant rendering classes
- Added *Trim* text preprocessing class
- Added CustomObject in the base package to allow for creation of custom classes
- Added keyword harvesting capabilities
- Added utils subpackage with capabilities to mimic a trained sklearn model
- Small documentation changes
- Changed the required imports for the package to streamline installation process, and created two installation options *aisquared* and *aisquared*[full]

• Version 0.2.3

- Added functionality to add custom preprocessing and postprocessing functions to the model deployment pipeline
- Added all parameter to LocalAnalytic class
- Changed under-the-hood functionality of mimic model function in line with updates to BeyondML
- Altered the ReverseMLWorkflow analytic
- Added the BarChartRendering, ContainerRendering, DashboardReplacementRendering, DoughnutChartRendering, HTMLTagRendering, LineChartRendering, PieChartRendering, SOSRendering, and TableRendering rendering classes
- Added the QueryParameterHarvester harvester class
- Added the *limit* parameter to the TextHarvester class

• Version 0.3.0

- Added type hinting to documentation strings
- Revamped documentation to use Sphinx
